

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

A QUARTERLY BIBLIOGRAPHY

OF

ANTHROPOLOGIC LITERATURE.

COMPILED BY ROBERT FLETCHER, M. D.

- Barrows** (S. J.) The evolution of the Afric-American. New York, 1892, Appleton, 315-345 p. (Evolution ser. no. 28.)
- Beddard** (F. E.) Animal colouration: an account of the principal facts and theories relating to the colours and markings of animals. London, 1892, Sonnenschein, 258 p. 8°.
- Casati** (C.) Note sur la nécropole étrusque decouverte en 1891 à Castiglione del Lago. Paris, 1892, Impr. nationale, 7 p. 8°.

ORIENTATION OF MASHONALAND TEMPLES.—In all the less ruinous temples of Mashonaland there is obvious evidence in the decoration on their exterior walls of orientation to either the rising or the setting sun at one of the solstices. The decoration on the great temple consists of a double band of chevron pattern, which extends along the part of wall directly opposed to the rays of the rising sun at the midsummer solstice. The time of the occurrence of the solstice was marked by means of a high monolith which would receive the shadow of another monolith placed on the wall at the middle of the decoration when the sun rose at the midsummer solstice. The great temple at first glance seems to be roughly elliptical, but when carefully measured its walls are found to be built on a number of circular curves of different radii. The great tower has a diameter at its base of 17.17 feet, and this length multiplied by the ratio of circumference to diameter (3.14) or by the square of this ratio gives either the radius or the diameter or half or double of these of the curves of all the walls of the best period which we have measured in Mashonaland.—*Swan in Scottish Geog. Mag., Sept., 1892, p. 485.*
